“Zero lives lost in collisions with commercial vehicles and mobile machinery”

Brigade is at the pinnacle of commercial vehicle and mobile plant blind-spot safety. A founder and innovator of sensing and monitoring systems that have helped save lives for over forty years.

Whilst our portfolio may be emulated, our commitment to vehicle safety, our reliable, trusted products and our dedicated team of experts, cannot. We invest in people as well as technology. Everyone in the Brigade family understands the life-changing significance of the products and service we provide and the importance of outstanding systems that work in the most demanding of situations.

For the future: We will continue to inform and work with policy makers and industries to ensure blind-spot mitigation is effective. We will recruit the highest calibre people who are passionate about what we do. We will impart expert knowledge and advice to help customers with their challenges. We will always seek to innovate and bring new products to market that help prevent collisions and save lives. We will strive to achieve our vision of zero lives lost by constantly improving the safe operation of commercial vehicles and mobile plant around the world.

- Brigade Electronics Group Plc management systems are certified to ISO9001:2015
- Our principal manufacturing facilities are certified to IATS16949:2016
- All applicable products have CE-marking in Europe and FCC/IC approval in North America
- The majority of our products comply with UN ECE Regulation 10 (EMC)
- Combinations of our camera monitor systems are certified to Regulation 46
- Our products comply with REACH and RoHS

Camera Monitor Systems

Brigade's camera monitor systems enable drivers and operators to manoeuvre and drive safely.

Vehicle-mounted cameras can help the driver to see blind spots by delivering a live feed on the monitor of everything in the camera view, including people or obstacles.

Camera monitor systems are used in a wide range of on and off-road applications to meet a host of health and safety and legislative requirements. The range includes entry-level reversing cameras to full-vehicle camera system with AI. With single-to-multiple camera inputs and auto-triggers, Brigade cameras and monitors will work on any application in any industry and are fully compatible with MDR recorders.

Internet Protocol (IP) Cameras are high-definition digital cameras with their own IP address. Directly connected to an MDR, the IP camera transmits digital video over a data connection (ethernet cable) where the images are saved to the onboard storage.

Backeye@360 is an intelligent camera monitor system designed to assist low-speed manoeuvring by providing the driver with a complete 'birds-eye' surround view of the vehicle in real time.

360° Camera Monitor Systems

An intelligent camera monitor system designed to assist low-speed manoeuvring by providing the driver with a complete ‘bird’s-eye’ surround view of the vehicle in real time.

360° technology works with four ultra wide-angle cameras, each covering one full side of the vehicle with a viewing angle of over 180°. High-mounted on the front, rear and sides, the calibrated cameras capture all of the surrounding area including the blind spots of the vehicle or machine.

The four live images are simultaneously sent to an electronic control unit (ECU) where they are instantly processed, combined, blended and stitched. A clear, real-time view is provided to the driver in a single image on the monitor.

360° with Artificial Intelligence

- Recognises and alerts the driver to people around the vehicle
- Detected people are shown in a coloured box overlayed on the 360° image on the driver’s monitor
- Compatible with all Brigade HD monitors and MDR recorders

<h3>Camera Monitor System Ranges</h3>		
AI	AI cameras are a new generation of active blind-spot detection. Using Artificial Intelligence, the cameras detect and recognise the human form within the pre-defined detection zone and reliably warn the driver visually and/ or audibly before a possible collision occurs.	
ELITE	Top of the range systems that are the first choice for Original Equipment Manufacturers (OEMs) and Bodybuilders. Exceptional quality and consistent performance in the harshest conditions. Rigorously tested to higher standards, the superior components and build quality are reflected in the Elite series' 5 year warranty. Ideal for heavy duty applications including N2 and N3 Heavy Goods Vehicles (HGVs), on/off-highway vehicles, agricultural machinery and mobile plant used on Construction, Civil Engineering, Quarry and Mine sites.	
SELECT	High quality, reliable, best-selling mid-range systems. First choice in the Aftermarket and popular also with OEMs and Bodybuilders. 3 year warranty. Ideal for medium to large on-highway vehicles and smaller off-highway mobile plant.	
ESSENTIAL	Entry level reversing solution for cost-conscious Aftermarket customers. Ideally suited for on-highway applications.

Mobile Digital Recording

Brigade's Mobile Digital Recording (MDR) systems are capable of capturing vehicle data and footage from up to 16 vehicle-mounted cameras.

The MDR range includes models with 4G connectivity capabilities, allowing data to be accessed from the recorder without having to physically go to the vehicle.

MDRs are compatible with all Brigade's Backeye® camera monitor systems, IP cameras and Backeye®360.

Dash Cams - compact, combined camera and recording systems that provide evidence in the case of vehicle incidents. The palm-sized devices are easily attached to the windscreen, enabling recording of the road ahead and in cab.

What are IP cameras & Expansion Modules?

An Internet Protocol (IP) camera is a high-definition digital camera with its own IP address. Instead of transmitting video over a video cable to a monitor or MDR, the IP camera transmits digital video to the MDR over a data connection (ethernet cable) where the images are saved to the onboard storage.

See pages 16-17 for the range of IP cameras

Brigade Expansion Modules use Power Over Network (PON) Switch technology to expand the channel capability of the MDR by transmitting digital video images from up to 8 IP cameras over a single ethernet cable to the MDR. The MDR on-screen display allows easy camera set up without need for specific IP camera knowledge

Benefit: Connecting IP cameras increases the number of channels available on the MDR:

MDR-641	- 4 x Analogue channels plus 1 x IP channel	= 5 channels
MDR-508	- 8 x Analogue channels plus 1 x IP channel	= 9 channels
MDR-644	- 4 x Analogue channels plus 4 x IP channels	= 8 channels
MDR-644 and 4 x PON switch	- 4 x Analogue channels plus 8 x IP channels	= 12 channels
MDR-508 and 4 x PON switch	- 8 x Analogue channels plus 4 x IP channels	= 12 channels
MDR-508 and 8 x PON switch	- 8 x Analogue channels plus 8 x IP channels	= 16 channels

- Size (WxHxD)
IP-EM4: 149 x 44 x 127mm
IP-EM8: 174 x 54 x 129.5mm
- 3 year warranty

Features

- Expands the channel capability of the MDR by enabling the addition of IP cameras:
IP-EM4 - adds 4 channels to MDR-508
IP-EM8 - adds 8 channels to MDR-508
IP-EM4 - adds 4 channels to MDR-644

Power

- Power consumption: 3 Watts

AI Connected dashcam

The AI Connected Dashcam is a compact, windscreen-mounted dual camera system that uses AI technology to provide event warnings, high-definition incident recording and monitor driver behaviour.

The forward-facing camera will identify and audibly alert a driver to a hazardous situation, such as a risk of colliding with the vehicle ahead or an unsignalled lane departure.

The driver-facing camera will identify issues such as mobile use, smoking and inattention.

- 1920P forward facing and 1080P driver facing cameras for clearer identification of registrations, faces and incident detail
- Supports up to 1TB storage capacity (256GB supplied)
- Built-in 4G allows operators to monitor fleets on the move (Subscription required) via a Dashboard or mobile app, and to remotely live stream or download recorded footage
- Simple installation and calibration
- Enhanced G sensor detects harsh braking, cornering and acceleration events
- Event notifications sent to the dashboard or app to alert fleet managers to high risk incidents

Object Detection Systems

Object detection systems detect stationary and moving objects, providing in-cab visual and audible warnings, alerting the operator or driver whose attention cannot be focused on all danger areas.

Backsense® heavy-duty radar sensor systems

designed for heavy-duty machines to detect people and objects in blind spots. Available with fixed and programmable detection ranges.

Ultrasonic detection sensors To minimise both vehicle damage and collisions with pedestrians, cyclists or objects. Perfect for road-going commercial vehicles operating in confined spaces or manoeuvring at low speed. An optional external speaking alarm can be added to alert cyclists and pedestrians that the vehicle is turning.

Detection systems with AI are algorithm-based systems that predict if a collision is likely to occur and alert the driver depending on the severity of the calculation.

ZoneSafe® uses Radio Frequency Identification (RFID) technology to create detection zones around vehicles and mobile plant. Vehicle-mounted antennas detect RFID tags which can be worn by workers, placed on objects or property, or set up around restricted areas.

CAREYE® Turn Assist
Artificial Intelligence blind spot detection

Developed by Eyyes
EYES

CAREYE® is a new Artificial Intelligence (AI) blind-spot turn assistant for large commercial vehicles, comprising of a camera-based sensor mounted high on the side of the cab, an ECU and a driver display in the cab.

Vulnerable road users are detected and classified, and their future course of movement is calculated using artificial intelligence. Depending on the risk of collision, the driver will receive a visual and/or audible warning in real time. Only if a collision is predicted will an audible warning be given, thus minimising false warnings and the likelihood of the driver becoming habituated by the alarm.

- Alerts the driver using Artificial Intelligence
- Differentiates between vehicles and vulnerable road users (VRU)
- Calculates the direction of VRUs
- The driver receives a progressive alert according to the predicted risk of collision
- The system is active up to 30km/h with or without indicators being activated
- Effective in low light and poor weather conditions
- Detection area: 10m length and 4m width from side of vehicle
- Information signal according to UNECE R151 (Blind spot monitoring system)
- Developed and produced in the European Union

Radar Predict
Artificial Intelligence blind spot detection

Brigade's Radar Predict is the latest innovation in side-detection safety, specifically designed to protect cyclists from collisions with HGVs. The advanced radar system uses AI technology to detect a potential collision by analysing data such as speed and direction of both the vehicle and cyclist. By differentiating between static and moving objects, the Radar Predict algorithm alerts the driver only when an impact with a cyclist is likely.

The single dual-radar unit is fitted to the nearside of the truck and gives complete coverage to the side of the vehicle, including the trailer unit. The driver is alerted if a cyclist enters a detection zone and receives a second warning if a collision is predicted.

- 180° Cyclist side detection
- Detection area of 4.5m x up to 37m
- Calculates if a collision is likely in the nearside blind spot
- Suitable for Rigid AND articulated vehicles
- Quick and easy installation
- Available for left and right side applications
- Meets Reg151 requirements
- Complies with PSS DVS – Independently tested

Sidescan®Predict
Artificial Intelligence blind spot detection

Designed for rigid-bodied vehicles, the system comprises of six ultrasonic sensors fitted along the side of the vehicle to increase safety when turning or low speed manoeuvring. Each sensor has a maximum detection radius of 2.5 metres.

Sidescan®Predict constantly gathers object detection data such as the distance of an object, cyclist or other VRU from the vehicle, whether moving or stationary, plus additional information such as the speed, direction, acceleration, and turning rate. The data feeds an algorithm to calculate the risk of a collision, which is delivered to the driver as a visual warning, audible warning or both, depending on the severity of the calculation.

Examples of scenarios (not limited to)

- Differentiates between static objects like road furniture and moving objects
- Calculates the direction and speed of VRUs
- The driver receives a progressive alert according to the predicted risk of collision
- The system is active up to 30km/h with or without indicators being activated
- Effective in low light and poor weather conditions
- Detection area: Up to 2.5m from side of vehicle
- For rigid vehicles only
- Independently tested - 2024 DVS/BSIS compliant

Features

- Detects objects in the nearside blindspot
- Differentiates between static objects and moving objects
- Calculates the risk of collision by evaluating speed, position and direction of the vehicle and detected VRU
- Driver audio and visual alerts
- Vehicle motion monitoring to remove unnecessary alarms
- Extra-wide sensor detection pattern for full side blind-spot coverage
- ECU configuration and diagnostics via USB
- Indicator-activated external turn alarms can be connected without additional hardware
- Built-in indicator and vehicle speed acquisition

- System automatically shuts off above 18.6 mph / 30 kph
- Auto brightness display. Manual alarm volume adjustment.
- Can be retrofitted by a trained installer.
- System can not be activated/deactivated by the driver.
- Environment Learning mode to eliminate false alarms from bodywork that intrudes in the first 100cm of the detection zone.
- Speed signal from Tachograph

Sidescan®Flex

Flexible side detection

Sidescan®Flex is a four-sensor system fitted to the side of a vehicle to detect objects in the nearside blind spot, where cyclists or pedestrians can otherwise go undetected.

An advancement to the standard Sidescan® system, Sidescan®Flex allows the operator to choose from four detection configurations, each with different detection distances and audible and visual alerts (see table).

Sidescan® Flex has an increased maximum detection range of 2.5 metres.

Ultrasonic Detection On-Screen Display Module

- Integration of Brigade's ultrasonic obstacle detection systems and Backeye® camera monitor systems
- Ultrasonic detection warnings overlaid onto camera image on in-cab monitor
- Reduced driver stress and distractions as all information is in one view

Sensor data and camera image combined

Brigade's ultrasonic proximity sensors minimise both vehicle damage and collisions with pedestrians, cyclists or objects. Perfect for road-going commercial vehicles operating in confined spaces or manoeuvring at low speed.

Working in conjunction with a Backeye® camera monitor system and up to two ultrasonic detection systems, the on-screen display module warns the driver of obstacles close to the vehicle by overlaying 3-stage audible and visual ultrasonic data onto the camera image on the monitor.

DVS Front Radar

Specifically designed to meet the 2024 DVS requirements, Brigade's DVS Front Radar is an advanced dual-radar collision prediction system with a 180° detection angle to the front of the vehicle. The driver is alerted through visual and audible signals if a vulnerable road user is detected in close proximity.

- Meets 2024 PSS Direct Vision Standard MOIS requirements
- Enhanced dual radar technology to detect pedestrians and cyclists in the front blind spot
- 3-stage system to alert drivers through visual and audible signals if a vulnerable road user is detected in close proximity to the front of the vehicle when stationary as well as moving off
- Real-time Feedback: Providing real-time warnings to the drivers for immediate reaction to prevent collisions
- Plug and Play System: Only requires power from the vehicle

 - 1 x Configurable radar sensor
 - 1 x Audible and visual display with USB socket and mounting bracket
 - 1 x 9m extension cable
 - 1 x Mini USB cable

Features

 - Frequency modulated continuous wave (FMCW) radar technology
 - Quick reaction time
 - Effectively detects stationary, moving and multiple objects
 - 1 activation input
 - 1 trigger output
 - Programmable: Detection area
 - Blind zones - system ignores fixed objects
 - Buzzer (70 to 90 dB(A) at 1m)
 - Horizontal detection angle: 140°

Power

 - Current: 0.8 Amps
 - Power consumption: 8 Watts

Durability & Standards

 - Operating temperature: -40 to +85°C
 - CE marked
 - UKCA marked
 - FCC approved
 - IC approved
 - E-Marked: UNECE R10 compliant

Backsense® CAN Radar

For OEM and specialist application markets, Brigade's Network Radar allows you to connect and link up to 8 sensors to cover large, sometimes complex blind spot zones around a vehicle or machine.

The system provides object detection in CAN (Controller Area Network) message format which may be processed to display data on control panels/displays on the vehicle or used to interact with aspects of the machine.

Each connected radar sensor is allocated a unique ID and will transmit data for up to 8 closest objects. With a detection range of up to 60m length and 16m width, it provides a flexible system to meet customer specific requirements.

- Provides object detection in CAN message format
- Independent CAN Bus may communicate with existing CAN network via CAN Gateway
- Separate CAN message & ID for each object detected (up to 8 per sensor)

ZoneSafe Control Unit

The ZoneSafe Control Unit is installed in the cab so it is clearly visible to the driver. ZoneSafe is activated when a VibraTag Driver Tag is inserted into the Control Unit prior to operating the vehicle. Audible and visual alerts indicate various alarm states including a two-stage alert for the detection of one or more tags, system errors and the non-insertion of a driver tag. A mute button can override a detection alert once a tag has been acknowledged.

ZoneSafe Antenna

A ZoneSafe Antenna creates a detection zone around a vehicle. Up to six antennas can be installed and linked in sequence to a control unit. The detection zone for each antenna can be programmed from smallest 3m up to largest 10m.

Zonesafe® RFID Tags

ZoneSafe RFID tags can be used to detect people, protect assets and to create exclusion zones. Each tag can be uniquely identified and linked to individual people. Driver tags have the same functionality as pedestrian tags and are also compatible with the control unit.

Warning Alarms

Vital safety devices needed to warn workers and pedestrians that a vehicle is manoeuvring.

bbs-tek® white sound® are the safest alarms in the world due to their instant locatability and directional sound. The multi-frequency alarms are only heard in the danger zone, thus eliminating noise nuisance for local residents. bbs-tek® white sound® Smart alarms auto-adjust to 5dB above ambient.

Quiet Vehicle Sounder Designed for electric and hybrid-electric vehicles of all types, the Front speaker QVS Electric Vehicle Sounder warns pedestrians and other vulnerable road users that a quiet vehicle is approaching.

Single Tone Alarms meet the basic needs of reversing safety by warning pedestrians and workers that a vehicle is reversing.

Warranty Terms and Conditions

Brigade warrants all goods to be free from defect in material and workmanship in normal use provided that they have been installed and operated in accordance with the instructions supplied. Normal wear-and-tear excluded. The commencement date of all warranties is the date of delivery to the purchaser unless otherwise agreed in writing by Brigade. The period during which the warranty applies is stated above. Brigade make no other warranty, express or implied, with respect to the goods, their marketability, quality or fitness for any particular use or purpose. In particular, but without prejudice to the general provisions of the conditions of sale, no responsibility is assumed for incidental or consequential loss by reason of any warranty express or implied. Full details of Brigade's Terms and Conditions can be found at brigade-electronics.com.
